## THE FRENCH ASSEMBLY AND THE IMPERIALISTS.

(From the Pall Mall Gazette, July 5.)

Not a single word has been said in the French Assembly since the 1st of July. The silence is not a sign of indifference, but of a profound and deliberate abstention. The Imperialists, who have been so active in the Chamber of Deputies, have been equally silent in the Assembly. This is a new and significant development. The Imperialists, who have been so active in the Chamber of Deputies, have been equally silent in the Assembly. This is a new and significant development. The Imperialists, who have been so active in the Chamber of Deputies, have been equally silent in the Assembly. This is a new and significant development.

## MR. SPURGEON ON THE ESTABLISHED CHURCH.

At an evening meeting of the Temperance Conference held in London, in connection with the Liberalism and Non-Resistance Convention, Mr. H. Spurgeon, who was loudly cheered, said, after some preliminary observations, that he wished to enlighten a little, if he could, the minds of the people on the subject of the Church. He said that the Church, as it is now, is a great evil. He said that the Church, as it is now, is a great evil. He said that the Church, as it is now, is a great evil. He said that the Church, as it is now, is a great evil. He said that the Church, as it is now, is a great evil.

purpose, and thus cooled down, it may be burnt again, and be converted into carbonic acid. He then, he gave 5226 lbs. of carbonic acid to burn, and this again requires 2890 lbs. of oxygen to combine with it. He then gave 5226 lbs. of carbonic acid to burn, and this again requires 2890 lbs. of oxygen to combine with it. He then gave 5226 lbs. of carbonic acid to burn, and this again requires 2890 lbs. of oxygen to combine with it.

With reference to the value and extent of the application of the patent, it is stated that, as far as the heating of the water in the boiler is concerned, the use of the patent is of great value. He then gave 5226 lbs. of carbonic acid to burn, and this again requires 2890 lbs. of oxygen to combine with it.

THE EXHIBITION. A correspondent of an Indian paper writes that the exhibition of the Indian people at the London Exhibition of 1873 was a great success. He then gave 5226 lbs. of carbonic acid to burn, and this again requires 2890 lbs. of oxygen to combine with it.

## LIGHT AND HEAT WITHOUT COAL—KALOGAS GAS.

(From the Mining Journal.)

It is a short time since the idea of obtaining an unlimited supply of light and heat without the use of coal was regarded as a mere dream. It is now a reality. The use of kalogas gas, a gas produced from the decomposition of water, has been found to be a practical and economical method of obtaining light and heat without the use of coal.

The kalogas gas (so called from the beautiful nature of the flame which it produces) is essentially a compound of carbonic oxide and hydrogen vapours, and is produced by the decomposition of water. It is a gas which is produced from the decomposition of water, and is a gas which is produced from the decomposition of water.

From this it would appear that the new invention is likely to prove of great value for the production of light and heat without the use of coal. It is a gas which is produced from the decomposition of water, and is a gas which is produced from the decomposition of water.

THE EXHIBITION. A correspondent of an Indian paper writes that the exhibition of the Indian people at the London Exhibition of 1873 was a great success. He then gave 5226 lbs. of carbonic acid to burn, and this again requires 2890 lbs. of oxygen to combine with it. He then gave 5226 lbs. of carbonic acid to burn, and this again requires 2890 lbs. of oxygen to combine with it.

MR. VAN DE WYER. Another of the three foreigners who, during the earlier years of the reign, helped to govern England (says the Spectator) has passed away. The Prince Consort and his wife, the Princess Alexandra, were in the city of London, and were in the city of London.

ORCHIDS IN ENGLAND IN SPRING. Towards the end of spring, some of the British representatives of the very remarkable family of orchids may be found. The British representatives of the very remarkable family of orchids may be found. The British representatives of the very remarkable family of orchids may be found.

ALFRED TENNYSON. His verses still bewitch youth and artists by their sentiment and beauty, but their thought takes hold of thinkers and men of the world. He has learned not only that the world is a great and noble thing, but that it is a great and noble thing. He has learned not only that the world is a great and noble thing, but that it is a great and noble thing.

## SPECIAL ADVERTISEMENTS.

since that law was passed as well as before. But this has been owing to the rise of wages and to the larger number of leisure hours at the disposal of the masses. In many instances in England, the increase of wages and the shortening of the hours of labour have meant so much more drinking at the alehouses. The province of legislation, however, is to deal primarily with those aspects of intemperance that affect public order, and it has been abundantly shown that disorderly drinking has been greatly diminished in England since the Act was passed, and that the curtailment

the hours has acted as a check on the most part of the evil of drunkenness. Returns called for from nearly all the large boroughs in England declared in favour of new legislation in the direction of the extension of hours. Notwithstanding all the abuse that was heaped on Mr. BRUCE for his 11 o'clock closing clause, very few persons can now be found who desire an alteration of that hour. The *Lancet* has published that in Newcastle-on-Tyne 70 per cent. of the accidents reported are the result of night drinking, and that two out of every three of the accidents

mitted to Bartholomew's Hospital at night the effects of drunkenness. Last year, according to the *Times*, the amount of money spent in the liquor trade in the United Kingdom was £146,000,000, and two-thirds of this sum came from the pockets of working men. In the absence of a strong public opinion, therefore, or of an urgent practical necessity, we should have thought that the new Ministry in England might have found some other way of saving the United Kingdom from the doom to which it was being

soon pressing a measure to increase the facilities for public drinking. The Gothenburg method of repressing drunkenness which Mr. ANSTRETH is seeking to introduce into Scotland is somewhat novel to British ideas, and is not at all likely to be found practicable. It assumes that the adulteration of drinks, and the excesses connected with the liquor trade generally, arise out of the fact that the sellers are personally interested in the traffic, and that no personal advantage accrued to parties unconnected with the trade, drinking would not be

jurious, would become a thing of rare occurrence, and might become unknown. The whole of the public-houses are bought up by a company, or are made to become public property like any other property of a Corporation, and are managed by trustees of the town. Ram-drinking is prohibited, and bars for drinking purposes are abolished. Taverns become converted into restaurants, where drinks of the glass can only be obtained in connection with meals. During the seven years that this has been the law in Gothenburg, drunkenness and disorder have been almost entirely eradicated.

gentleman has offered £10,000 towards trying the scheme in Scotland. But however successful a system like this may be in practice in a small place like Gothenburg, in large towns in England and in the colonies it would be a serious matter for a Municipal Council to buy up all the public-houses with their vested interests, and then to conduct them on behalf of the citizens under a law which withdrew all inducements to make them paying concerns. An other business of this sort might possibly further the ends of morality and good order;

**THE MINISTER FOR MINES.**—We have received telegram from Inverell, stating that the recent appointment of Mr. Abbott, as Minister for Mines, does not meet the approval of the people there, and that strenuous efforts are being made to induce some person to oppose the gentleman when he seeks re-election; up to the present time, however, no one has come out.

**SUPREME COURT.—Business This Day.**—First Court: Colonial Sugar Refining Company v. Malby; Humphrey v. Liverpool, London, and Globe Insurance Company; Farrelly v. Hill, Fisher v. Ferguson.

**DISTRICT COURT.**—The sittings for this month (namely, this morning with a list of 794 cases (Nos. 323 to 3316), and will be provided over by Mr. District Judge Wilkinson. Those which are deferred will appear as follows: Nos. 2867 to 2871 will be taken at 10 a.m.; No. 2862 will not be taken before 11 a.m.; No. 2867 will not be taken before 12 noon, finishing at No. 2782. Tuesday, 4th, No. 2783 will be taken at 10 a.m.; No. 2868 will not be taken before 11 a.m.; No. 2864 will not be taken before 12 noon, finishing with No.

**LATE ATMOSPHERIC CHANGES.**—On Thursday morning, last, the 30th July, the barometer began to fall very rapidly, and continued to oscillate and fell until 8 p.m., when the oscillation became still more marked, and the fall more rapid. This continued until 4 p.m. on Friday, when it failed to go further than 29.7 inches—the lowest reading we have for a very long time. It then commenced to rise gradually, and continued throughout the night. The wind during the forenoon of Friday was moderate—from a westerly direction—with heavy clouds and little rain; but from p.m. the force of the wind rapidly increased, until at 6 o'clock it was blowing at the rate of 15 miles an hour, and by midnight had risen to 25 miles an hour. From dawn on Saturday a blow

(with about the same velocity) until about 10 clock p.m., when it gradually fell, the wind continuing throughout the time steady from the westward. The rain, being driven by the wind, appeared to be much heavier than it actually was. At 11 p.m., the quantity of rain measured on Friday evening, being 1.776 inch, and at 9 a.m. on Saturday morning, .436 inch. It is interesting to remark that after the heavy fall of rain between 2 and 8 p.m. of Thursday, the 30th, the wind got round to the north-east, and blew fresh for two or three hours, bringing in a fresh shower of rain, which was accompanied by lightning. Several smaller showers of thunder and reflections of lightning were observed to follow during the next half-hour. At half-past 10 the fell fell to almost dead calm, and veered once more to the westward, in which direction it continued until yesterday.

**THE REV. GEORGE HOLMES.**—Many of our readers will learn with deep regret of the death of the Rev. George Holmes, one of the Wesleyan ministers of this city, who for the last fifteen months has been suffering from a severe attack of the disease known as the "Surry Fever." Mr. Holmes expired at his residence, No. 100, Broadway, on Saturday morning, from a sickness under which he had been long suffering, but the early and fatal termination of the disease has struck many of his friends with surprise as well as sorrow. Mr. Holmes came to the colony about seven years ago. His first connection was with the Wesleyan mission at Port Phillip, and he was instrumental in the construction of the labourers' stone church erected in that place.

Before his removal to Sydney he was stationed at Turb. His failing health did not allow him to do full justice to his ability; but he was believe an earnest and zealous preacher of the Gospel, and his pulpit ministrations were everywhere well received. As a platform speaker he was regarded as a man of considerable promise; and he enjoyed in a very large degree the respect and esteem of the body to which he belonged.

**THE UNIVERSITY UNION.**—There was a meeting of members on Friday night for the purpose of debating upon the education question. The very windy and rainy weather had the effect of making the attendance very small. The speakers were Messrs. H. H. Barton, and other students, and of keeping away several ministers of the Gospel, and of course, the meeting was not a very successful one. The meeting was adjourned to next Friday, when, as the

**THE TURF.**—The racemores Little Dick and Atlanta, and the steeplechases Prior and Genseloh, arrived on Saturday from Melbourne, by the City of Melbourne. Owners of horses are reminded that the general assembly for the forthcoming meeting of the Australian Jockey Club will be held on Tuesday next, and all interested parties should reach the secretariat at or before 4 p.m. on that day. On the following day, Wednesday, nominations for the events to be run at the Hines Glab meeting must be made.

**WORTHY OF IMITATION.**—The Canadian House of Commons has passed a resolution that no interesting questions shall be asked within the precincts of the House.
